

XST INTRON-X SERVICE TOOL

OPTIMIZED SERVICE AT EVERY LEVEL

The INTRON-X Service Tool allows seamless setup, maintenance, and troubleshooting for all INTRON-X modules and IP terminal devices from INDUSTRONIC. Your service staff can securely access and monitor the real-time status of all devices, either via local service interfaces or over the network.

The standard version includes all the essential base features, while the Pro version offers advanced convenience functions designed to optimize workflows and accelerate your service processes.

- IP device settings and role assignments
- Simultaneous access to multiple IP devices
- Intuitive user interface with integrated help function
- Monitoring of IP device status, log files and fault messages
- Real-time display of IP device activity data, including graphical representation
- Backup and restore of device settings
- Password management guided by predefined policies
- Configure, calibrate, and diagnose speaker line impedance monitoring
- Software update support for single devices

FEATURES OF PRO VERSION

Software update support for multiple IP terminal devices simultaneously

Controller tunneling enables the remote access via the controller to its assigned IP terminal devices - no direct IP network access required

Auto listing of all IP terminal devices assigned to the controller

PC CONFIGURATION AND SYSTEM REQUIREMENTS

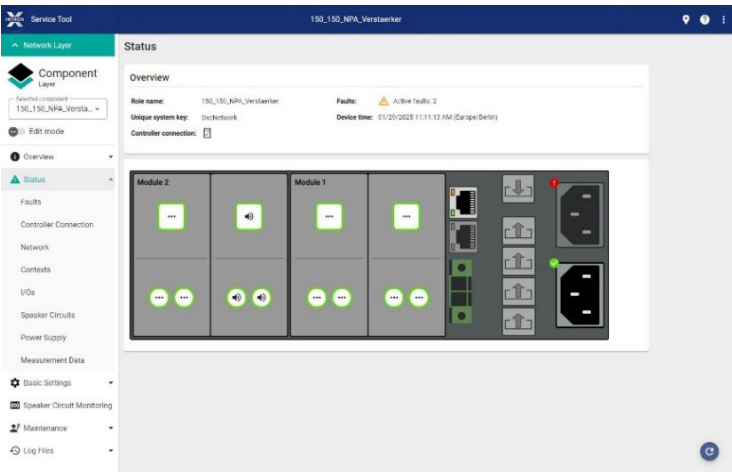

Operating system	Microsoft® Windows® 10/11
Processor	1 GHz
RAM	2 GB
Hard disk space	500 MB
Screen resolution	Min. 1280 x 1024 px
(Network) Interfaces	USB port (USB 2.0, backward compatible to USB 1.1) Ethernet (for connection of IP components via network)

EXEMPLARY IMAGES

STATUS OF NPA AMPLIFIER

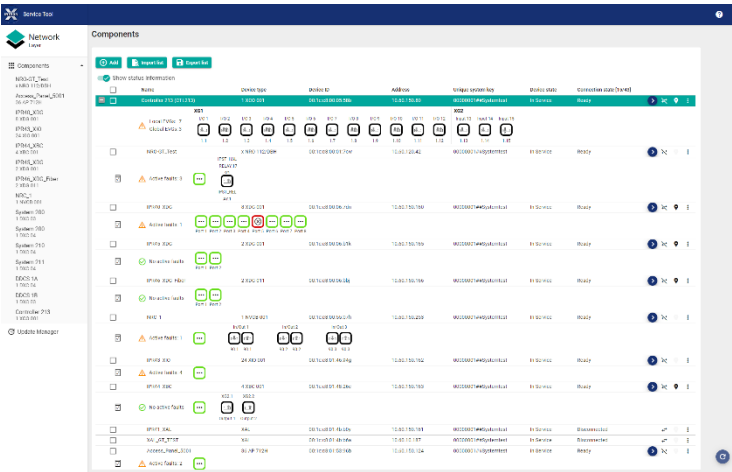

For a public address unit, e.g. the NPA, there is a graphical visualization available. The illustration displays the status of the configured elements.

When hovering the mouse over individual elements, tooltips are indicated in the illustration describing the elements.

COMPONENTS VIEW

You can monitor the IP device status, log files and fault messages. There is also the real-time display of IP device activity data, including graphical representation.

Boost your efficiency with the Pro version by completing tasks faster than ever with multi-device updates, controller tunneling and auto listing of all IP devices assigned to the controller.
